WHY FRAMEWORKS WIN

Trader Psychology · Cognitive Biases · What Separates Professionals from Retail

THE HARD TRUTH: INDIA TRADER STATISTICS 2024

Before learning frameworks, understand WHY 9 out of 10 retail traders lose money consistently.

93%

of F&O traders lose money (SEBI Study 2024)

₹1.81L Cr

Retail F&O losses in FY2024 (SEBI report)

93%

Quit trading within 3 years

<3%

Consistently profitable traders

No Entry Plan

Buying on tips, WhatsApp forwards, or gut feel with no defined setup criteria. 100% emotional.

Overtrading

5-10 trades a day instead of 2-3 setups a week. Transaction costs + mental fatigue compound losses.

Position Sizing Errors

Going all-in on a single trade. One bad trade erases months of gains.

No Stop-Loss

Hoping a losing trade 'comes back'. Converts small manageable losses into account-busting blows.

Wrong Market Phase

Trading aggressively when Nifty is in Stage 3/4 decline. Swimming against a strong tide.

No Framework = No Edge

Random entries never produce consistent exits. Consistency requires a structured, repeatable process.

6 COGNITIVE BIASES KILLING YOUR TRADES

FOMO

Fear Of Missing Out

Example: Buying Zomato at ₹290 after it ran +230% from ₹88 base — just because everyone's talking about it.

Fix: Discipline: If it's >10% extended past pivot, it's not your trade. Next setup is always coming.

LOSS AVERSION

2× Pain vs. Pleasure

Example: Holding IRFC at -25% , hoping it comes back, instead of taking an 8% stop and preserving capital.

Fix: Pre-set your stop. The moment you enter, your stop price is your exit. Non-negotiable.

CONFIRMATION BIAS

Seeking Agreeable Info

Example: You want to buy a stock. You only read bullish articles. You ignore the falling RS and shrinking volume.

Fix: Check the bearish case before every entry. If you can't find a reason NOT to buy, you're biased.

RECENCY BIAS

Overweighting Recent Events

Example: After 3 winning trades, you double size on trade #4 without checking edge count or setup quality.

Fix: Position size is always determined by edge count + risk formula, never by recent results.

OVERCONFIDENCE

Overestimating Your Skill

Example: 'I've studied charts for 2 years — I don't need a stop.'

Results: One position wipes 40% of capital.

Fix: The market humbles everyone. Systems and stops protect you when overconfidence strikes.

ANCHORING

Fixating on Past Prices

Example: 'CG Power was ₹50 once, it's now ₹690 — it's too expensive.' Missing a 13x run due to anchor bias.

Fix: Price level is irrelevant. What matters: Is it Stage 2? Does it have edges? What's the R:R?

Journal every trade

Most traders skip N →

They end up monitoring 50+
stocks and executing none well.

Most traders skip P →

They enter with no stop, no
target, no size — pure gambling.

The E step is where →

Discipline separates winners.
Pre-plan = automatic decisions =
no emotion.

S — SEARCH & SCAN: BUILD YOUR UNIVERSE

Step 1 | Detailed
Criteria

Your scan is your filter. Garbage in, garbage out. Start with Nifty 500 — India's highest-quality 500 companies.

Universe

Start with the Nifty 500 index. Broadest quality filter — excludes illiquid, penny, and manipulated names.

Price Filter

Price > ₹50. Avoid stocks below ₹50 — prone to operator manipulation, wide spreads, poor fills.

Liquidity — Volume

Average daily volume > 5 lakh shares OR avg daily turnover > ₹10 Cr. Ensures clean fills at any size.

Liquidity — F&O Filter

For leveraged traders: stock must be in F&O segment (NSE futures list). Tighter spreads, better price discovery.

Market Cap Floor

Mid-cap and above: Market cap > ₹2,000 Cr. Institutional participation = better chart patterns.

Earnings: QoQ EPS Growth

Current quarter EPS must be $\geq 20\%$ above same quarter last year. Accelerating growth = big edge. $\geq 30\%$ = A+ signal.

Earnings: 3 Quarters of Growth

Look for 3 consecutive quarters of EPS acceleration. Pattern: $15\% \rightarrow 22\% \rightarrow 38\%$ = institutional magnet.

Relative Strength (RS)

Stock must have outperformed Nifty 500 over BOTH last 3 months AND last 6 months. Dual-timeframe RS is more reliable.

Market Stage

Broader market (Nifty 500 weekly) must be in Stage 1 or Stage 2. Never scan aggressively in Stage 3/4.

Sector Momentum

Stock's sector must be outperforming Nifty over last month. Leading sector + leading stock = best odds.

S — SCAN RESULTS: INDIA 2024-25

Practical Output | Nifty 500
Screen

Running the 6-criterion scan in Oct-Nov 2024. These stocks passed — here's how to read the output.

Stock (NSE)	Sector	Avg Vol	QoQ EPS	6M RS vs N500	Market Cap	Result
Waaree Energies	Renewable Energy	18L	EPS +220%	+74%	₹72,000Cr	✓ PASS
Cochin Shipyard	Defence/Shipbldg	22L	EPS +180%	+162%	₹40,000Cr	✓ PASS
CG Power	Capital Goods	48L	EPS +45%	+68%	₹1,05,000Cr	✓ PASS
Titagarh Rail	Railways/Defence	8L	EPS +92%	+55%	₹15,000Cr	✓ PASS
Solar Industries	Defence/Explosives	5L	EPS +38%	+48%	₹87,000Cr	✓ PASS
Lloyds Metals	Iron & Steel	38L	EPS +58%	+142%	₹43,000Cr	✓ PASS
UPL Limited	Agrochemicals	42L	EPS -35%	-28%	₹28,000Cr	✗ FAIL – EPS & RS
GMR Airports	Infrastructure	65L	EPS -18%	-12%	₹62,000Cr	✗ FAIL – EPS & RS

KEY: Renewable energy, Defence, Capital Goods dominated 2024-25 scans. PSU infrastructure and Agrochem consistently failed RS & EPS tests.

N — NARROW: FROM 20 STOCKS TO YOUR TOP 5

Step 2 /
The Brutal Edit

This is where most traders fail. They keep a 'watchlist' of 40 stocks — and trade none of them properly.

1. Leading Sector?

Is the sector outperforming the Nifty 500? In FY25, Defence, Railways, Renewable Energy, and Capital Goods were leaders. Pharma mid-cap emerged late 2024.

AVOID: Telecom, IT services, FMCG (laggards).

2. Clean, Tradeable Chart?

Look for base patterns: Flat bases (3-8 weeks), Tight closes (within 1-2% weekly), Cup & Handle, VCP. **AVOID:** V-shaped recoveries, choppy, wide-swinging action,

3. Institutional Footprints?

Rising DII/FII % in the last 2 quarters (check shareholding history). Block/bulk deals at the NSE website. Delivery % rising on up-days. This signals smart money is accumulating.

4. Not Extended?

Stock should be within 5% of the base pivot point. If already 20-30% above the last proper base = too risky. Pattern's R: R deteriorates dramatically when chased.

5. Fits Your Timeframe?

Intraday: Skip: SNIPE is for swing/positional. Swing (1-4 weeks): Look for EMA-aligned setups. Positional (1-3 months): Stage 2 base breakouts. Match your holding period to pattern type.

NARROW DECISION TREE

Start with scan output (20-30 stocks)

Is it in a leading sector? **NO → Remove**

Is chart in base (not extended)? **NO → Remove**

Any institutional activity? **WEAK → Low priority**

Passes all 5 narrow criteria? **NO → Remove**

Shortlist: Max 5-7 stocks **→ Move to IDENTIFY**

I — IDENTIFY THE EDGES: THE 4 CORE EDGES

Step 3 | Your
Competitive
Advantage

An edge is a measurable, repeatable condition where the probability of a profitable trade is statistically elevated.

HV1

Highest Volume in 1 Year

What: Daily volume surges to the HIGHEST level seen in the past 52 weeks.

Why: Only institutions move volume to 1-year highs. Smart money is aggressively accumulating.

How: Check: Today's volume vs. highest volume bar of past 52 weeks on daily chart.

Cochin Shipyard — Aug 2024: Volume over 15x 50DMA, highest in 15 months. Stock +48% over next 4 weeks.

HVE

Highest Volume Ever (All-Time)

What: Volume surges to the HIGHEST ever traded in the stock's entire history.

Why: Once-in-a-lifetime accumulation. Often on first IPO-stage breakouts or major fundamental re-rating.

How: Compare to all historical daily bars. Requires a long chart history — use TradingView weekly chart.

Cochin Shipyard HVE on August 2023 + breakout from 39-week consolidation base. Stock moved 728%

I — IDENTIFY THE EDGES: THE 4 CORE EDGES

Step 3 | Your
Competitive
Advantage

An edge is a measurable, repeatable condition where the probability of a profitable trade is statistically elevated.

RS

Relative Strength Edge

What: Stock falls significantly LESS than Nifty during market corrections, and bounces FASTER.

Why: Stocks that show RS during pullbacks are being bought by institutions — they're 'under accumulation'.

How: When Nifty drops 3%: Does this stock drop <1%? When Nifty recovers 5%: Does it rise 8%+?

GVT&D — Oct 2024: Nifty 50 fell -6.22%. GVT&D rose by 6.224%. RS Edge clear. +144% in 15 months.

N×

N-Factor: Multiple Momentum Alignment

What: 3 or more momentum factors aligning simultaneously: New High + EPS Acceleration + Volume + RS.

Why: Each factor adds probability. All 4 aligning = institutional conviction = highest quality setup.

How: Score it: +1 for each: New 52W high, EPS accel QoQ, RS top 20%, HV1 or HVE. Score 3+ = A+ setup.

CCL Products May 2025: New 52W high ✓ + EPS +25% ✓ + HV1 ✓ + RS +89% vs Nifty ✓ = 4/4 edges.

I — THE EDGE SCORING SYSTEM

Quantify Your Conviction
Before Every Trade

Score each trade BEFORE entering. This score determines your position size. No score = no trade.

Edge Criteria	Check	Points
HV1 Edge: Today's volume = 52-week high volume	✓ or ✗	1 pt
HVE Edge: Volume = all-time highest ever	✓ or ✗	1 pt
RS Edge: Held better than Nifty last correction	✓ or ✗	1 pt
N-Factor: 52-week NEW HIGH on price	✓ or ✗	1 pt
BONUS: All 4 edges align simultaneously	✓ or ✗	+1 bonus

LIVE SCORING EXAMPLE: CCL PRODUCTS

HV1 Edge: ✓ Volume = 14-month high

RS Edge: ✓ Held -1.2% when Nifty -5.8%

N-Factor (52W High): ✓ New all-time high on breakout day

HVE Edge: ✓ highest ever

TOTAL SCORE: 4/4 → Position Size: 20% of capital

POSITION SIZE BY SCORE

Score 0 **0%**
No edges — NO trade

Score 1 **8-10%**
Speculative — minimal size

Score 2 **12-13%**
Good setup — standard size

Score 3 **15%**
High conviction — larger size

Score 4 **18-20%**
Max conviction — A+ setup

Score 5 (bonus) **20%+**
Rare — scale in on breakout

P — PLAN THE TRADE: THE 5-PART TRADE BLUEPRINT

Step 4 | Never Enter
Without a Plan

*Write your plan **BEFORE** placing any order. If you can't write it down, you're not ready to trade it.*

1

Entry Level — Pivot Point

Buy at the VCP pivot (breakout above the last contraction high). OR use a 'cheat entry' 2-4% BELOW the pivot when price tightens, and volume dries up — better risk : reward, same setup.

Example: A stock pivot: ₹2,850. Cheat entry at ₹2,720 when the weekly range was ₹2,690-₹2,760.

2

Stop-Loss — Non-Negotiable

Stop below the base low OR 7-8% below entry — whichever gives TIGHTER protection. Wider stops require proportionally smaller position size. Never move a stop DOWN (wider) after entry.

Example:

entry ₹2,720. Base low ₹2,580. Stop = ₹2,580 (5.1% below entry). Tight and logical.

3

Position Size — Based on Risk

Method 1 (Edge Count): Edge score × size table. Method 2 (Risk-based): Risk 1% of account per trade. Position Size = (1% of account) ÷ (Entry – Stop). Both methods give similar results.

Example: ₹10L account, 1% risk = ₹10,000. Entry ₹2,720, Stop ₹2,580. Difference = ₹140. Qty = $10,000 \div 140 = 71$ shares.

4

Target — Minimum R:R

Minimum R:R ratio = 2:1. If stop is 5% below entry, target must be at least 10% above. Preferred: 3:1 or higher. First target: +20-25% from entry. Then trail.

Example: Entry ₹2,720, SL ₹2,580 (-5.1%). First target: ₹3,264 (+20%). Second target: Trail below each 10-day low.

5

Sell Rules — Pre-Define Your Exit

Stop hit → Exit immediately. No exceptions. Pattern failure (price falls back into base) → Exit 50%. 3 weeks of no progress at target zone → Take partial profits. Up 25%+ rapidly → Lock 50%.

Example: CG Power: Entered ₹380. SL ₹345. Stock hit ₹389 + failed to advance over 3 weeks → trimmed 50% at ₹388 before the final +30% leg.

E — EXECUTE & JOURNAL: WHERE PLANS MEET MARKETS

Step 5 / Discipline Over Emotion

Pre-Market Ritual (8:30–9:15 AM)

Review your watchlist. Check global markets (Gift Nifty, Dow futures). Confirm no negative news on your stocks. Set price alerts at pivot levels. Pre-enter limit orders if using AMO.

Order Type: Always Limit Orders

Market orders on breakouts result in terrible fills — often 1-2% above the intended price on high-volume days. Place a limit order at pivot +0.5%. If not filled, the stock 'ran away' — which is fine. Next setup.

The 1% Rule — Sizing Discipline

Never risk more than 1-2% of total capital on any single trade. A 10-loss streak (possible) can only cost 10-20% max. Protects you from ruin. Enables recovery. Non-negotiable rule.

Scale-In: Only on Winners

Initial position at pivot (50-75% of planned size). Add remaining 25-50% ONLY when stock is up 3-5% from entry and holding on above-average volume. NEVER add to losers.

The Stop Is Sacred

Once your stop price is hit — exit. No second-guessing. No 'but the news is good'. No averaging down. A stock that hits your stop has failed your test. Move on. Protect capital for the next A+ setup.

Journal: 12 Fields, Every Trade

Date, Ticker, Setup Type, Edge Count, Entry, Stop, Size, Target, Exit, P&L%, Emotion State, Lesson. Review every Sunday. Identify your top 3 errors each week. Fix one at a time.

WEALOCITY ANALYTICS
beyond money...

MINERVINI'S SEPA[®] MODEL

Specific Entry Point Analysis — Trend Template · VCP · Pivot · Add Rules

SEPA® — WHAT IS SPECIFIC ENTRY POINT ANALYSIS?

Mark Minervini | US Investing Champion

SEPA is the precision surgical instrument inside S.N.I.P.E. It answers two questions with surgical accuracy: WHEN and WHERE to enter.

S

Stage Analysis

Only buy Stage 2 uptrends.
Stage 2 = stock above
rising 30W MA, making
higher highs and higher
lows.
Trend Template

E

Entry via VCP

Volatility Contraction
Pattern — a series of
progressively tighter price
contractions on declining
volume. Institutional
absorption.

P

Pivot Point Entry

The precise price where
the VCP resolves. Enter
within 5% of the pivot on a
volume expansion day.

A

Add to Winners

Add position on first
pullback that holds above
the 10-day MA after a
successful breakout. Never
add to losers.

SEPA + SNIPE SYNERGY

SNIPE's 'I' (Identify) = SEPA Stage Analysis. SNIPE's 'P' (Plan) = SEPA Pivot Entry. SNIPE's 'E' (Execute) = SEPA Add Rule. Both frameworks reinforce each other — use them simultaneously, not as alternatives.

SEPA® TREND TEMPLATE — ALL 10 CRITERIA

*Every Criterion
Must Be Met
Before Any Entry*

The Trend Template is SEPA's mandatory pre-entry checklist. A stock failing even one criterion is not a SEPA candidate.

1 Price above both 150-DMA (30W MA) and 200-DMA (40W MA)
Non-negotiable — confirms stock is in an uptrend at all time horizons

2 150-DMA is ABOVE the 200-DMA
Moving averages must be in proper bullish order

3 200-DMA is trending UP for at least 1 month (ideally 4-5 months)
Rising long-term trend = Stage 2 confirmed

4 50-DMA (10W MA) is above both 150-DMA and 200-DMA
Short-term trend aligned with medium and long-term

5 Current price is ABOVE the 50-DMA
Price must be in the correct relative position

6 Price is at least 30% ABOVE its 52-week low
Shows meaningful price advance from a base period

7 Price is within 25% of its 52-week HIGH
Stock must be in the upper range — not in a deep base

8 Relative Strength vs Nifty 500 — stock outperformed over 6 months
RS Rank equivalent: Top 30% minimum, top 20% preferred

9 EPS growth $\geq 20\%$ QoQ for at least 2 consecutive quarters
Fundamental strength driving institutional buying

10 Stock is in a leading sector (sector RS in top 25%)
Sector leadership multiplies individual stock's odds

THE VOLATILITY CONTRACTION PATTERN (VCP) — ANATOMY

SEPA's Core Entry Tool

VCP = the stock's base coiling tighter and tighter as selling pressure exhausts — right before a powerful breakout.

STAGE 2 UPTREND → BASE FORMS → VCP TIGHTENS → PIVOT BREAKOUT

Volume ↓ ↓ ↓ declining each contraction → LOWEST at C4 → EXPLODES at breakout

Rule 1: Contraction Size

Each contraction must be **SMALLER** than the previous. C1=-22%, C2=-14%, C3=-8%, C4=-4%. Progressive tightening = institutions absorbing supply.

Rule 2: Volume Contraction

Volume **MUST** decline as price tightens. Low volume on tight closes = sellers exhausted. Smart money holding steady.

Rule 3: Duration

Ideal VCP: 3-6 weeks of base time. 2-3 contractions minimum. Too short = not enough shakeout. Too long (>8W) = deteriorating.

Rule 4: The Pivot Entry

Enter when price breaks above the **LAST** contraction's high on volume $\geq 1.5x$ the 50-day average. This is the lowest-risk entry point.

WEINSTEIN STAGE ANALYSIS — WHEN TO BE IN THE MARKET

SEPA Foundation | India Market Application

STAGE
1

BASING STAGE

Action: WATCH / ACCUMULATE

Stock moves sideways after a decline. 30W MA flattens. Volume dries up. Smart money quietly accumulates. Retail bored and selling. *Nifty Midcap 150 — Oct 2021 to May 2023: Sideways. Better to build a watchlist than trade.*

Exposure:
0–10%

STAGE
2

ADVANCING STAGE

Action: BUY — THIS IS SNIPE/SEPA ZONE

Price breaks above Stage 1 base on expanding volume. 30W MA turns up. Higher highs and higher lows. Where all great trades happen. *Nifty 500 — Jun2023 to Sep 2024: Stage 2. IRFC +400%, Waaree +230%, CG Power +290%.*

Exposure:
80–90%

STAGE
3

TOPPING STAGE

Action: SELL / REDUCE / NO NEW BUYS

Price stalls at highs. Volume surges but price doesn't advance (distribution). 30W MA flattens again. Exit all positions gradually. *Nifty 500 — Oct to Nov 2024: Distribution signs. FII selling ₹1.5L Cr in 6 weeks.*

Exposure:
0–10%

STAGE
4

DECLINING STAGE

Action: CASH / SHORT (Advanced)

Price breaks below Stage 3 support. 30W MA turns down. Retail should move to cash. Only experienced traders consider shorts. *Mid/Smallcap — Nov 2024 to Feb 2025: Stage 4. Nifty Midcap fell -18% from the peak.*

Exposure:
0%

SEPA CASE STUDY — COCHIN SHIPYARD (NSE: COCHINSHIP)

India Case Study | 2023-24 | +294% Year Gain

Defence + Shipbuilding sector. India's largest public-sector shipyard. PLI scheme + order book catalyst.

TREND TEMPLATE CHECK (June 2024):

Criterion	Pass?	Detail
Price > 150DMA & 200DMA	✓	₹342 > 150DMA ₹270 > 200DMA ₹274
30WMA > 40DMA	✓	Proper bullish MA stack confirmed
40WMA trending up > 1 month	✓	Rising steadily since Oct 2023
Price 30% above 52W low	✓	52W low ₹160. +150% above low.
Within 25% of 52W high	✓	52W high ₹342. Current ₹342. Note: forming base- cup

EDGE SCORECARD

HV1 Edge ✓

Vol = 15-month high

RS Edge ✓

Held -0.5% (Nifty -5%)

N-Factor ✓

All-time high on breakout

HVE Edge ✗

Not highest ever

SCORE: 3/4 → 15% position size

Entry: ₹342 Stop: ₹322 Target: ₹600+

RESULT: Stock reached ₹620 within 3 weeks. Gain: +90% from entry. Year gain (2024): (Rs.2979) +775%. India's best defence stock 2024.

beyond money...

O'NEIL'S CANSLIM METHODOLOGY

C-A-N-S-L-I-M — The 7 Criteria Every Super-Stock Shares

CANSLIM — WILLIAM O'NEIL'S BLUEPRINT

7 Criteria Every Super-
Stock Must Have

Developed from O'Neil's study of every market winner from 1952 to 2001. CANSLIM stocks outperform 90%+ of the market.

C

Current Quarterly Earnings

Current EPS must be UP 25% or more vs. same quarter last year. Accelerating EPS growth (each quarter higher than last) = A+ signal.

CG Power Q2FY25: EPS ₹3.8 vs ₹2.5 last year = +52%. 3 consecutive quarters of acceleration. Classic C-grade A+.

A

Annual Earnings Growth

Annual EPS growth rate must be 25%+ for at least 3 consecutive years. 5-year EPS CAGR of 25%+ is exceptional.

IN Solar Industries: 5-year EPS CAGR of 38%. Revenue from defence explosives growing 40%+ annually. A-grade: A+.

N

New Catalyst / New High

New product, new management, new industry condition, or simply NEW 52 / WEEK HIGH. Most amateur traders fear new highs — institutions chase them.

Waaree Energies: New IPO (Nov 2023) + India's 500 GW renewable target by 2030 = massive N-catalyst.

S

Supply & Demand (Volume)

Shares outstanding should be manageable (not 10 billion shares). Stock must show volume surge of 40-50% above average on up-days.

Titagarh Rail: Only 14.5 Cr shares outstanding (tight float). Breakout volume 3.4x average = massive demand vs. tiny supply.

L

Leader or Laggard?

Buy only the leading 1-3 stocks in a leading sector. Avoid the 'cheap' stock in the same sector. Leader always outperforms followers.

In Railways 2024: Titagarh Rail (leader) vs Jupiter Wagons (follower). Titagarh +140%, Jupiter +65%. Buy the leader.

I

Institutional Sponsorship

At least some institutional buying (DII/FII). Look for rising ownership trend over last 2-3 quarters. Increasing MF schemes holding = buy signal.

Cochin Shipyard: DII holding rose from 8.2% to 15.6% in 3 quarters leading into the 2024 breakout. Smart money was loading.

M — MARKET DIRECTION: Stage 2 only. 75% of stocks follow the market. Wrong market = even perfect CANSLIM stocks fail.

CANSLIM: C & A — EARNINGS DEEP DIVE

Quarterly + Annual EPS | Accelerating Earnings

Earnings are the engine of a super-stock. CANSLIM requires BOTH current quarter AND multi-year earnings excellence.

C — CURRENT EARNINGS

Minimum threshold

Current quarter EPS $\geq$ +25% vs same quarter last year (YoY).

Acceleration signal

If Q1=+18%, Q2=+26%, Q3=+38% — acceleration pattern = A+ quality.

Revenue must confirm

EPS growth without revenue growth = margin expansion only.
Not durable. Need both.

Avoid 'one-off' EPS

Confirm growth is from operations, not asset sales or one-time items.

Best in class

India examples exceeding criteria: Waaree +220%, Cochin +180%, Titagarh +92%.

A — ANNUAL EARNINGS

3-year minimum

Annual EPS must grow 25%+ for at least 3 consecutive years.

3-year is better

5-year EPS CAGR above 25% = institutional magnet. Screener.in filter.

ROE > 17%

High return on equity confirms management quality + competitive moat.

Profit margin stable

Net profit margin must be stable or expanding. Contracting = warning.

India EPS CAGR standouts

Solar Industries: +38% CAGR. Lloyds Metals: +58% CAGR. CG Power: +44% CAGR.

CANSLIM SCORECARD: 2024-25 INDIA STOCKS

How Top Stocks Scored on All 7 Criteria

Applying all 7 CANSLIM criteria to India's 2024-25 top performers. Green = pass. Red = fail.

Stock	C	A	N	S	L	I	M	Grade	2024 Return
Cochin Shipyard	✓	✓	✓	✓	✓	✓	✓	A+	+294%
CG Power	✓	✓	✓	✓	✓	✓	✓	A+	+182%
Lloyds Metals	✓	✓	✓	✓	✓	✓	✓	A+	+162%
Solar Industries	✓	✓	✓	✓	✓	✓	✓	A	+89%
Titagarh Rail	✓	✓	✓	✓	✓	✗	✓	B+	+93%
Waaree Energies	✓	✓	✓	✓	✓	✓	✓	A+	IPO run
UPL	✗	✗	✗	✗	✗	✗	✓	F	-31%

KEY FINDING: Stocks with 7/7 CANSLIM criteria in a Stage 2 market = the highest-probability multi-bagger setups. UPL failed 6/7 — returned -31%. Framework works.

FRAMEWORK COMPARISON: SNIPE vs SEPA® vs CANSLIM

Which to Use When | How They Complement Each Other

These are NOT competing frameworks. They are layers of the same process. Use all three simultaneously.

Dimension	S.N.I.P.E.	SEPA® (Minervini)	CANSLIM (O'Neil)
Primary Role	Full trading workflow/process	Surgical entry timing	Fundamental + Technical filter
Best Used For	End-to-end trade management	Finding low-risk entry points	Stock quality screening
Key Strength	Process discipline	VCP pattern precision	Earnings quality validation
Entry Signal	Edge-based breakout	VCP pivot + volume surge	Cup/Handle or base breakout
Time Horizon	Flexible: swing to positional	Swing to positional (2W–3M)	Positional (weeks to months)
Stop-Loss Rule	Below base low / 7-8% max	7-8% hard stop	7-8% hard stop (same)
Position Sizing	Edge score based (8–20%)	Risk-based: 1-2% capital at risk	Concentration in top 3-5 ideas
Fundamental Check?	Minimal (RS + EPS check)	Minimal (EPS + RS)	Deep (7 criteria required)
Pattern Required?	Useful but not mandatory	VCP required (core)	Cup/Handle, Flat base preferred
India Suitability	★★★★★ (very high)	★★★★☆ (high)	★★★★☆ (high)
Learning Curve	Low — process-driven	Medium — chart reading	Medium-High — fundamental research
Best Combined With	SEPA + CANSLIM screening	SNIPE process + CANSLIM filter	SNIPE process + SEPA entry

INDIA TRADER'S TOOL ECOSYSTEM

2025-26 | Free & Paid | What to Use for What

MarketsmithIndia.com

CANSLIM Screener
PAID+FREE

Use: Weekly base breakouts, Relative Strength scans. RS at New high. All CANSLIM Screeners.

Best for: Investing for short- to medium-term returns. Best research tool for Fundamental and technical screeners.

Screener.in

Fundamental Screener
FREE

Use: EPS growth, ROE, debt ratios, 5-year CAGR, shareholding history, peer comparison. CANSLIM-type filters.

Best for: CANSLIM 'C' and 'A' screening. Build a custom query for EPS accel + ROE + sales growth.

StockEdge

Sector + FII Data
FREE+PAID

Use: Sector rotation tracking. FII/DII buying data. Bulk/block deal alerts. Earnings calendar. News + technical combined.

Best for: FII buying sector analysis. Which sectors are DII/FII loading? Align with CANSLIM 'I' criteria.

Zerodha Streak

Strategy Builder
PAID

Use: Backtest technical strategies without coding. Build AND, OR conditions. Deploy alerts on Kite automatically.

Best for: Backtest your SNIPE scans (EMA + volume + RSI conditions). Set live alerts on Nifty 500 watchlist.

TradingView

Charting Platform
FREE+PAID

Use: Best chart tool. Multi-timeframe, 100+ indicators, Pine Script strategies, pattern recognition. Use for VCP identification.

Best for: VCP identification, Stage Analysis, 30W MA overlay. Use Pine Script for automated pattern alerts.

SCREENER.IN — CANSLIM FUNDAMENTAL QUERY

Copy-Paste Ready | Weekly / Monthly Scan

Screeener.in's custom query builder lets you filter by fundamental criteria. Use this for CANSLIM 'C', 'A', 'I' criteria.

SCREENER.IN QUERY (Paste in Custom Screen Builder):

Market Capitalization > 2000 AND
EPS last year>1. AND
EPS preceding quarter >1 AND
Return on equity > 17 AND
Debt to equity < 0.5 AND
Net profit > 0 AND
Sales growth > 20 AND
OPM latest quarter > 10

WHAT EACH FILTER CATCHES:

Market Cap > 2000 Cr	→ Institutional-grade size — avoids penny stocks
EPS 3yr CAGR > 20%	→ CANSLIM 'A' — annual earnings growth filter
QoQ EPS > 20%	→ CANSLIM 'C' — current quarter earnings filter
ROE > 17%	→ Management efficiency — CANSLIM 'A' quality check
Debt/Equity < 0.5	→ Balance sheet strength — O'Neil preferred low-debt leaders
Sales growth > 20%	→ Revenue must confirm earnings — not just margin expansion
OPM > 10%	→ Ensures business has real pricing power and margins

Combine tools for maximum signal quality: Screener.in (fundamentals) → Chartink (technical) → Tickertape (RS ranking).

ZERODHA STREAK CONDITIONS

Entry Condition:

$\text{EMA}(50) > \text{EMA}(150)$ AND $\text{EMA}(150) > \text{EMA}(200)$ AND $\text{Close} > \text{EMA}(50)$ AND $\text{Volume} > 1.5 \times \text{SMA}(\text{Volume}, 50)$

RS Condition:

$(\text{Close} / \text{Close}[126]) > (\text{NIFTY500_Close} / \text{NIFTY500_Close}[126]) \times 1.05$

Stop-Loss:

Trailing stop: 8% below highest close since entry

Target:

Fixed target: +25% from entry OR trail below 10-day low

Backtest Period:

Jan 2022 to Dec 2024 (3 years, bull + bear cycles)

Segment:

F&O Segment stocks only (better liquidity)

LIVE INDIA CASE STUDIES 2024-25

3 Complete Trade Walks | Entry → SL → Position Size → Exit → Lesson

INDIAN MARKET CASE STUDIES — RS & RRG SIGNALS

PSU Banks 2022–24 | +150–300%

RS SIGNAL

MRS crossed above ZERO in early 2022 when most analysts were negative on PSU banks. Mansfield RS + Stage 2 breakout = Massive rotational move captured fully.

INDIAN MARKET CASE STUDIES — RS & RRG SIGNALS

WEALOCITY ANALYTICS
beyond money...

Nifty IT 2022 TOP | -40 to -65%

EARLY EXIT

Nifty IT sector RS began declining while the broader market was still rising.
Mansfield RS went NEGATIVE months before the crash. sell signal triggered.

INDIAN MARKET CASE STUDIES — RS & RRG SIGNALS

Auto Sector 2023 | +80%+ RRG SIGNAL

The auto sector entered the RRG Improving quadrant in Q1 2022 while still underperforming the Nifty. Accelerating RS-Momentum tail pointed firmly toward Leading — 8 weeks ahead of analyst upgrades.

Nifty Realty 2023-24 | +200%+ RRG SIGNAL

Realty sector RRG showed transition from deep Lagging to Improving in mid-2022, with strong upward tail by Q1 2023. Entered Leading firmly — beginning the 3x run in real estate stocks.

CASE STUDY #1 — LLOYDS METALS & ENERGY (NSE: LLOYDMETAL)

2024 | Mining & Steel | +162% Year

Iron ore mining + captive power. Sector re-rating + volume explosion. One of 2024's cleanest SNIPE setups.

SNIPE WALKTHROUGH:

S – SEARCH

Nifty 500 scan. Volume >₹50Cr/day ✓, EPS +58% QoQ ✓, RS top 10% vs Nifty 500 over 6M ✓, Price >₹50 ✓.

N – NARROW

The Iron & Steel sector is leading. Lloyds = stock with both mining (upstream) AND steel (downstream) advantage. Market cap ₹42,000Cr = mid-cap with room. Chart: 7-week flat base.

I – EDGES

HV1 ✓ (volume 3.2x 50DMA on breakout day). RS Edge ✓ (held -0.4% when Nifty -4.1%). N-Factor ✓ (new ATH). Score: 3/4.

P – PLAN

Entry: ₹799 (pivot). Stop: ₹732 (prior bar low, -8.2%). Size: 3 edges = 15% of capital. Target: ₹1,050 (+20%) then trail. Tested Rs.146. in 15 weeks

E – EXECUTE

Limit order placed at market open. Filled at ₹799. Stop adjusted to ₹730 (round number safety). Journalled immediately.

CANSLIM SCORE

C – Current EPS	✓	+58% QoQ
A – Annual EPS	✓	5Y CAGR 149%!
N – New Catalyst	✓	Iron ore price surge + new mine
S – Supply	✓	Tight float, vol surge
L – Leader	✓	#1 in sector by RS
I – Institutional	✓	DII +5.2% in 2 quarters
M – Market	✓	Stage 2 (April-Sep 2024)

GRADE: A+ (7/7)

RESULT: Entry ₹799 → 3-months peak ₹1,490 (+82.73%). Year 2024 total: +180%. Stop never hit. Trailing stop exited at ₹1,420.

CASE STUDY #3 — WHAT A BAD TRADE LOOKS LIKE

Learning From a Failed Setup | Real-World Example

Learning from failures is MORE valuable than analysing winners. Here's a real broken trade with full post-mortem.

EXAMPLE: SUZLON ENERGY (NSE: SUZLON) | May 2025 | Attempted Breakout

S – SCAN ERROR

Problem: Stock passed volume filter but EPS recovery was from debt-restructuring gains, NOT operating profit. Core business still loss-making. Missed this.

Fix: ALWAYS check operating profit, not just headline EPS, One-time gains are not earnings quality. Don't trust volume alone.

N – NARROW ERROR

Problem: The renewable Energy sector was lagging the Nifty 500 by -14% over 6 months. Suzlon was an individual story in a weak sector. Should have been eliminated here.

Fix: Sector RS check is mandatory in Narrow step. If sector is lagging, individual stock analysis is wasted effort.

I – IDENTIFY ERROR

Problem: Only 1 edge (retail volume spike on FY24 turnaround buzz). RS Edge was NEGATIVE. N-Factor absent (stock below 52W high). Score: 1/4.

Fix: 1-edge setups deserve 8% max size. This trader sized 18% — a 4-edge sizing mistake on a 1-edge setup.

P – PLAN ERROR

Problem: No stop-loss was written down. The plan was to 'watch it' and 'sell if it falls'. Classic amateur mistake amplified by high position size.

Fix: If you don't write the stop BEFORE entry, you don't have a stop. You have a hope. Hope is not a trading strategy.

E – EXECUTE ERROR

Problem: Stock fell 9% in 4 days. Trader held, hoping for recovery. Stock fell 17% in 3 weeks. No stop = account damage with zero edges.

Fix: The stop exists to protect you EXACTLY when you want to hold. That discomfort IS the signal to exit. Respect the stop — Suzlon fell another 30% over the following months.

RESULT: -19% loss on 18% position = -3.42% account loss. 3 months of gains erased in 3 weeks. Suzlon is a story stock — stories don't replace edges.

CASE STUDY #2 — WHAT A BAD TRADE LOOKS LIKE

Learning From a Failed Setup | Real-World Example

Learning from failures is MORE valuable than analysing winners. Here's a real broken trade with full post-mortem.

EXAMPLE: GMR AIRPORTS INFRA | Nov 2024 | Attempted Breakout

S – SCAN ERROR

Problem: Stock passed volume filter, but EPS was actually DOWN - 18% YoY due to high debt charges. Missed this.

Fix: ALWAYS verify EPS direction on Screener.in BEFORE adding to shortlist. Don't trust volume alone.

N – NARROW ERROR

Problem: Infrastructure sector was lagging Nifty 500 by -12% over 6 months. Should have been eliminated here.

Fix: Sector RS check is mandatory in Narrow step. If sector is lagging, individual stock analysis is wasted effort.

I – IDENTIFY ERROR

Problem: Only 1 edge (volume spike-possibly from news/event). RS Edge was NEGATIVE. N-Factor absent (stock below 52W high). Score: 1/4.

Fix: 1-edge setups deserve 8% max size. This trader sized 18% — a 4-edge sizing mistake on a 1-edge setup.

P – PLAN ERROR

Problem: No stop-loss was written down. The plan was to 'watch it' and 'sell if it falls'. Classic amateur mistake.

Fix: If you don't write the stop BEFORE entry, you don't have a stop. You have a hope. Hope is not a trading strategy.

E – EXECUTE ERROR

Problem: Stock fell 12% in 3 days. Trader held, hoping for recovery. Stock fell 22% total. No stop = catastrophic loss.

Fix: The stop exists to protect you EXACTLY when you want to hold. That discomfort IS the signal to exit. Respect the stop.

RESULT: -22% loss on 18% position = -3.96% account loss. 4 months of gains erased in 3 days. Zero edges = zero trade.

POSITION SIZING — THE COMPLETE FRAMEWORK

Your Money Management Rules | 2 Methods Compared

Position sizing is the single most important factor separating consistent winners from account blowups.

METHOD 1: EDGE COUNT SIZING

0 edges	0%	No trade. No edge = no allocation.
1 edge	8-10%	Speculative — strict discipline needed
2 edges	12-13%	Good setup — standard allocation
3 edges	15%	High conviction — larger size
4 edges	18-20%	Maximum — A+ setup only
4 + bonus	Up to 22%	Exceptional — scale in on confirm
Max positions open	5-6	Never exceed 6 concurrent trades
Max account in market	80%	Keep 20% as dry powder

Both methods give similar results.

Use whichever you find easier to calculate quickly.

METHOD 2: RISK-BASED SIZING

Formula:

$$\text{Position Size} = (\text{Account} \times \text{Risk}\%) \div (\text{Entry} - \text{Stop})$$

Account Size ₹10,00,000

Risk Per Trade 1% = ₹10,000

Entry Price ₹412 (CG Power)

Stop Price ₹378 (-8.2%)

Price Risk ₹412 - ₹378 = ₹34

Shares to Buy ₹10,000 ÷ ₹34 = 294 shares

Position Value 294 × ₹412 = ₹1,21,128

% of Account ≈12.1% — within 2-edge sizing

MARKET TIMING: BREADTH INDICATORS FOR INDIA

Know When to Be Aggressive vs. Defensive

Individual stock setups fail 75% of the time when the market is in Stage 3 or 4. Check breadth FIRST, then scan.

% Stocks Above 50-DMA (Nifty 500)

BULL: >60% = healthy bull market. Trade full exposure.

CAUTION: 40-60% = mixed/cautious. Reduce exposure to 50-60%.

BEAR: <40% = distribution underway. Maximum 20-30% exposure.

% Stocks Above 200-DMA (Nifty 500)

BULL: >65% = strong underlying trend. Be aggressive.

CAUTION: 50-65% = trend weakening. Be selective.

BEAR: <50% = bear market conditions. Minimal long exposure.

FII Net Buying (Monthly)

BULL: >₹10,000 Cr net buying = institutional tailwind. Follow the flow.

CAUTION: ₹0 to ₹10,000 Cr = neutral. DII buying may compensate.

BEAR: FII selling >₹20,000 Cr = danger. Track StockEdge daily.

Nifty 500 vs 30W MA

BULL: Nifty 500 above rising 30W MA = confirmed Stage 2. Maximum exposure.

CAUTION: Nifty 500 near 30W MA = Stage 1/3 border. Reduce size.

BEAR: Nifty 500 below declining 30W MA = Stage 4. Exit longs.

Advance-Decline Line (NSE)

BULL: A-D line making new highs with index = broad participation. Bullish.

CAUTION: A-D line diverging from index = narrow leadership. Be careful.

BEAR: A-D line falling while index holds = distribution. Reduce exposure.

SELL RULES — THE MOST NEGLECTED TRADING SKILL

When and How to Exit Every Position

Most traders obsess over entries. Professionals obsess over exits. Your sell rules determine your actual return.

DEFENSIVE SELLS — WHEN TO CUT LOSS

Stop-Loss Hit

Non-negotiable. Stock hits your pre-set stop = EXIT 100%. Do not ask questions. Do not average.

Pattern Failure

Price falls back into the base after a breakout. False breakout = exit immediately, before stop.

Volume Reversal

Breakout on massive volume, then price reverses and closes BELOW the pivot. Institutional reversal.

Earnings Miss

Company reports EPS below expectations after you're in. Sell before the market digests fully.

3 Strikes Rule

Stock fails to make progress 3 weeks in a row after entry. Capital is stuck = opportunity cost.

OFFENSIVE SELLS — LOCKING PROFITS

First Target Reached

Stock hits +20-25% target: sell 50%. Let the other 50% trail. Lock in gains, stay in the game.

Climactic Volume Top

Massive volume spike at a high after a long run = distribution. Sell into strength.

3 Weeks Tight at Top

Stock consolidates in a tight range 3+ weeks near highs after +30% move = preparing for reversal.

Market Turns Stage 3

Broader market showing distribution: reduce all positions to 50% regardless of individual charts.

Trailing Stop Activated

Set stop below each new 10-day closing low. When hit, exit the remaining position.

THE TRADE JOURNAL — YOUR EDGE DEVELOPMENT SYSTEM

12-Field Template | Review Weekly

WEALOCITY ANALYTICS
beyond money...

A journal separates traders who improve from those who repeat mistakes. No journal = no learning = no improvement.

1. Date

Entry date + day of week

2. Ticker

NSE symbol

3. Setup Type

VCP / Breakout / Pullback

4. Edge Count

1/2/3/4 — which edges?

5. Entry Price

Planned vs actual fill

6. Stop-Loss Price

Where does trade invalidate?

7. Position Size ₹

% of account + share qty

8. Target Price

R:R ratio (must be $\geq 2:1$)

9. Exit Price & Date

Actual exit price + date

10. P&L (₹ and %)

Absolute + percentage

11. Emotion State

Confident / FOMO / Fear / Neutral

12. Key Lesson

One actionable improvement

Weekly review ritual: Every Sunday, read all week's journal entries. Identify top 3 errors. Fix ONE this week. Repeat forever.

10 MOST COMMON MISTAKES — AND THE FIX

*Self-Audit:
Which of These
Are You Making?*

1. Chasing extended breakouts

Fix: >10% past pivot. Late entry = wide stop = terrible R: R.
Fix: If it's extended, it's not your trade. Wait for the next base.

3. No written stop-loss

Fix: 'I'll just watch it' = guaranteed large loss. Fix: Write stop BEFORE clicking Buy. If you can't write it, don't trade.

5. Averaging down

Fix: Adding to a loser. Doubles your risk in a stock that's already failing your plan. Fix: Only add to WINNERS.

7. Ignoring volume on breakout

Fix: Price breakout + low volume = false breakout. Fix: Require volume $\geq 1.5 \times 50DMA$ on breakout day.

9. Moving stop to breakeven too fast

Fix: Giving the stock no room to breathe. Fix: Move to breakeven only after +10-15% gain.

2. Skipping the Narrow step

Fix: 40 stocks on watchlist = scattered focus = mediocre execution. Fix: Maximum 5 stocks. If it's not top-5, don't trade it.

4. Sizing by emotion

Fix: 'I really like this one' = oversizing. Fix: Edge count determines size. Always. No exceptions.

6. Trading in all markets

Fix: Buying breakouts in Stage 4 downtrends. Fix: Check Nifty 500 Stage weekly. Reduce when <Stage 2.

8. Selling too early

Fix: ₹20 target, stock goes ₹200. Fix: Sell 50% at first target, trail the rest below 10-DMA.

10. No post-trade review

Fix: Same mistakes repeated month after month. Fix: Journal every trade. Review every Sunday. Fix one error per week.

Honest self-assessment: Score yourself 1 point for each mistake you've made this month. Score > 5 = your journal needs more attention.

CASE STUDY #2 — CG POWER (NSE: CGPOWER)

2024 | Capital Goods | +182% | Electronics PLI Sector

Railway electronics + transformers + motors. Murugappa Group company. Classic SEPA VCP + CANSLIM A+ stock.

FULL TRADE TIMELINE:

Q4FY24 EPS +13% YoY. Revenue +22%. Sector PLI for electronics announced.

Apr '24 8-week flat base forms. Price: ₹370-₹410 range. Volume shrinking.

May '24 Nifty 500 corrects -5.2%. CG Power: -0.8%. RS Edge confirmed.

Jun '24 VCP: C1=-18%, C2=-10%, C3=-5%. Volume at 14-week low at C3.

Jul '24 Pivot ₹412. Volume 3.9x 50DMA. HV1 Edge. Entry triggered.

Oct '24 Stock hits ₹742 (+80%). Trailing stop set below 10-DMA at ₹680.

Nov '24 Market Stage 3 signs. FII selling. Trimmed 50% at ₹698.

Jan '25 Remaining 50% trailed to ₹640 stop. Full exit ₹640 (+55%).

VCP ANATOMY & TRADE MATH

VCP C1	₹465 → ₹380, -18%	Volume: -28% vs prior 3W
VCP C2	₹410 → ₹368, -10%	Volume: -52% vs prior 2W
VCP C3	₹389 → ₹369, -5%	Volume: LOWEST in 14W
PIVOT	₹412 breakout	Volume: 3.9x 50DMA average
Entry	₹412 (limit order)	Filled at open same day
Stop	₹378 (-8.2%)	Below VCP base low ₹373
Account	₹10,00,000	1% risk = ₹10,000 at risk
Qty	$\frac{₹10,000}{₹34} = 294$ shares	Position value ₹1,21,128 (12%)
Target 1	₹494 (+20%)	Partial profit exit
Final Exit	₹640 (+55%)	Trailing stop hit

LESSON: SEPA VCP worked perfectly. Sell in 2 tranches on Stage 3 market signs. Never hold 100% into obvious distribution.

KEY TAKEAWAYS — WHAT TO DO MONDAY MORNING

Your 6-Step Action Plan

1 Set up your 3 Chartink scans

Copy the SNIPE breakout scan, HV1 scan, and RS Edge scan from today's slides. Run all 3 every evening by 4 PM. Save them with alerts enabled.

2 Build your Screener.in CANSLIM filter

Set up the 8-condition CANSLIM query. Run it weekly (Sunday evenings) to identify fundamentally superior stocks to add to your master watchlist.

3 Open your trade journal TODAY

Google Sheet or Excel. Add 12 columns. Record your NEXT trade in it before entering. If you can't fill all 12 fields before entry, the trade isn't ready.

4 Learn to identify VCP patterns

Pull 20 historical NSE charts. Find VCP patterns. Count contractions. Mark the pivot. Measure volume decline. Build pattern recognition muscle memory.

5 Check market stage every Sunday

Open Nifty 500 weekly chart. Draw the 30W MA. Is price above or below? Is MA rising or falling? Set your weekly exposure accordingly.

6 Trade fewer, better

Maximum 3 positions this week. Focus only on A+ setups with 2+ edges. 1 great trade > 10 average trades. Quality of setup determines quality of results.
